This year Landslide Studies and Services Division (LSSD) of NBRO implemented a new project on ***Introduction of land use techniques for landslide risk reduction in Badulla District.***

Under this project LSSD expects to compile,

- all the available data on landslides in a spatial database
- analyses the data against the causative factors of landslides
- and propose suitable land use and construction techniques for landslide risk reduction

within the project area. The cost of the project is Rs. 03 Million and the duration is one year.
